PROFESSIONAL SUMMARY

Motivated AI & Data Science undergraduate with hands-on experience in full-stack web development (React.js, Node.js, MongoDB) and embedded systems. Proven ability to lead cross-functional teams and deliver end-to-end technical projects. Seeking an entry-level software engineering or data science role to apply strong programming fundamentals and a passion for building impactful solutions.

EDUCATION

Eluru College of Engineering & Technology

Eluru, Andhra Pradesh

Bachelor of Technology – Artificial Intelligence & Data Science

Aug 2024 – May 2027

- Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Computer Networks, Statistics for Data Science

DNR Polytechnic College

Andhra Pradesh

Diploma – Electronics and Communications Engineering

Jun 2021 – May 2024

- Graduated with distinction; built foundational knowledge in microcontrollers, circuit design, and embedded systems programming

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), C, HTML5, CSS3

Frontend: React.js, Bootstrap 5, Responsive Web Design

Backend & DB: Node.js, Express.js, MongoDB, REST APIs

AI / Data Science: NumPy, Pandas, Scikit-learn, Matplotlib (exposure)

Embedded Systems: Arduino, C/C++ for Microcontrollers, Sensor Integration

Tools & Platforms: Git, GitHub, VS Code, Netlify, Linux CLI

Soft Skills: Team Leadership, Agile Collaboration, Problem Solving, Technical Presentation

EXPERIENCE

Project Team Lead – Embedded Systems

Eluru, Andhra Pradesh

DNR Polytechnic College (Final-Year Capstone)

Jan 2024 – May 2024

- **Situation:** Campus street lighting consumed energy continuously regardless of ambient light or pedestrian activity, resulting in significant electricity waste.
- **Task:** Designed, built, and demonstrated an automatic street lighting system as the technical lead of a 4-member team within a 4-month timeline.
- **Action:** Engineered an Arduino-based controller integrating LDR and PIR sensors; wrote modular C firmware to enable context-aware lighting; coordinated task allocation and bi-weekly progress reviews across the team.
- **Result:** Delivered a fully functional prototype that reduced simulated energy consumption by an estimated 40%; project received faculty commendation for innovation and practical applicability at the college-level project showcase.

PROJECTS

Personal Developer Portfolio | React.js, Bootstrap, Netlify

2024

- Architected and deployed a fully responsive single-page portfolio website showcasing projects, skills, and contact information; achieved 95+ Lighthouse performance score.
- Implemented React component-based architecture with smooth scroll navigation, reducing initial load time by 30% compared to a static HTML prototype.
- Hosted on Netlify with continuous deployment via GitHub, enabling zero-downtime updates.

Automatic Street Lighting System | Arduino, C, LDR/PIR Sensors

2024

- Led end-to-end development of an IoT-enabled smart lighting prototype using Arduino Uno and environmental sensors, cutting simulated power usage by ~40%.
- Authored complete technical documentation and delivered a 10-minute live demonstration to a panel of 5 faculty evaluators, earning top project ranking in the department.

CERTIFICATIONS & ACTIVITIES

Actively Pursuing: AWS Cloud Practitioner, Google Data Analytics (Coursera)	2025
Open Source Contributor: GitHub profile with personal projects in React and Python	Ongoing
